

Jersey City Bitcoin Meetup #1

Agenda:

- Intro
- Macro update
- Bitcoin price update
- Shamir's Shards
- OP_Return Wars
- Alby Hub Demo
- Bitchat Demo
- Bitcoin Amsterdam Recap
- Club Direction Socratic Discussion

JC Bitcoin Meetup General Guidelines

- Basic Rules:

- Please no photos, no videos, no public tagging without consent!
- This group is Bitcoin only so please limit discussion of other cryptocurrencies.
- PLEASE respect the space. We love the barrow mansion and ask for help making it look better than when we arrived.
- For newcomers and OGs alike it is worth reiterating that absolutely no one from JC Bitcoin will ever solicit Bitcoin or crypto transfers here or on any other channel

Get lightning-fast, low-cost bitcoin payments and payouts for your business with our powerful API, ecommerce plugins, or hosted payment pages.

JC Bitcoin Meetup

- You are all real ones, thanks for coming!
- Who are we?
 - We are the JC Bitcoin meetup! A space for formal discussions, seminars, and workshops for the Jersey city community
- Our Mission:
 - Create a Bitcoin education center in Jersey City
 - Empowering individuals and onboarding businesses to the bitcoin economy, and combating centralized control of money through grassroots activism
- Our Plan:
 - Educate our community, and train you! The bitcoin educators
 - Work with other US meetup organizers to open source our best practices and streamline local adoption all over the world
 - We will host these educational socratic meetups monthly, every 3rd Thursday of the month here at the Barrow Mansion
- How you can help
 - Tell your friends!
 - Join us and develop content

Socratic Seminar

- The Socratic Seminar, also known as Socratic Dialogue, is rooted in the conversations the Greek philosopher Socrates (470–399 BC) had with his pupils
- The Socratic method is a form of cooperative argumentative dialogue between individuals, based on asking and answering questions to stimulate critical thinking and to draw out ideas

Spotlight Sections:

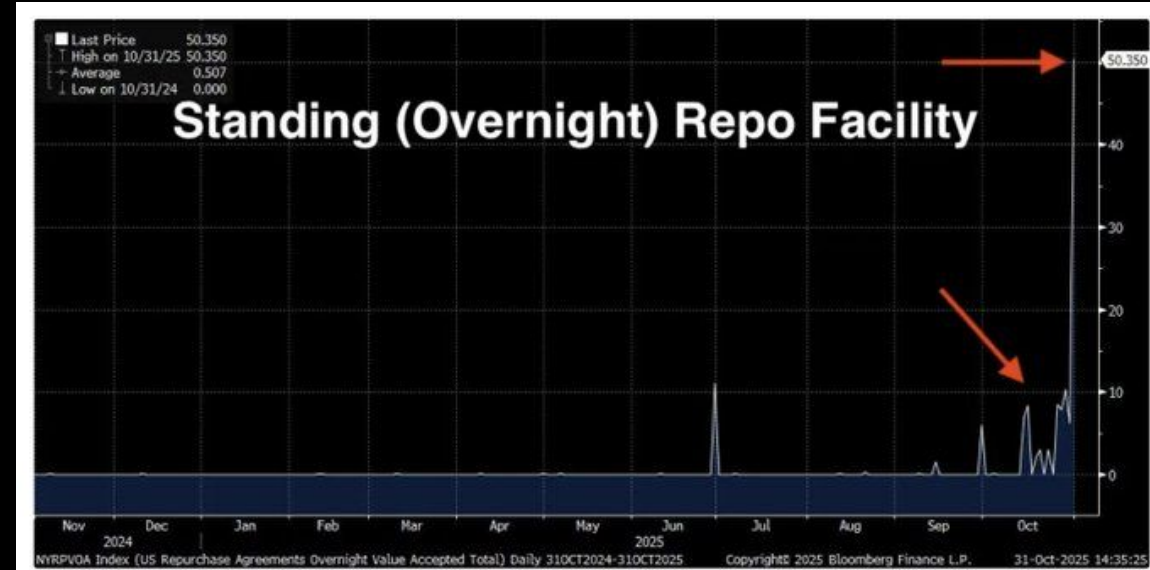

- Podcast/Youtube Spotlight
- Bitcoin News
- Rabbit Hole Recap & freedom tech spotlight
- Twitter Highlights
- Etc.

Macro Update:

- Bitcoin is the leading indicator, it's sniffing liquidity issues
- Repo market dysfunction
 - Tight bank reserves
 - Private credit collateral trust issues
- Fed December Rate cut in question
- Shutdown causing the TGA to overfill, \$550B in bill rotation
- Dollar strength
- Stock Market pullback, Ai bubble fears
- Tariff uncertainty
- QT/QE and Dovish Fed in 2026
- Large break and liquidity flood are not base case

Bitcoin Price Update:

- \$95K was the 'bulls last stand' but has since been broken
 - Supertrend indicator is red for the first time since the bear market
 - Could also be close to a bottom like in 2021 when it was broken for only a few months
- \$87K is a key area on the price chart to hold, with \$75K as the major bottom
- Expect continued weakness in the short term/coming weeks & months as the price continues to play out a bearish divergence amongst a weak macro outlook
- Y'all are legends for being here

Bitcoin Price Update:

- Mid/longer term outlook is bullish according to JPM reflecting on largest liquidation event in crypto history
- Pairs nicely with rate cuts, the end of QT, max fear environment, and fiscal stimulus going into midterms
- Repo stress and TGA caused illiquidity has bottomed
- Rotation out of overvalued Ai stocks could be a headwind, and the breaking of the 4 year cycle
- Simmering risk of turmoil in Ai trade, private credit, China, etc. further spilling over and tightening liquidity conditions or recession,
 - Although, these are key strategic sectors for Trump admin. So expect liquidity support as a base case scenario

When bitcoin crash and burns but you're used to it

JPMorgan sees bitcoin price reaching about \$170,000 within the next 6 to 12 months

By Yogita Khatri

Bitcoin Price Update:

- Majority of sell pressure this year has originated from legacy HODLers (2015-2021) who have taken record amounts of profits
- Bitcoin IPO thesis
- “The great rotation”
- Other theories
 - Ai has been capturing capital enthusiasm, retail, and risk appetite away from bitcoin
 - Disillusionment on btc reserve
 - Cycle theorists selling
 - Broke crypto bros selling
- Recent momentum selling is due to trading signals and breaking of key support indicators
 - TBL Liquidity 10/29 sell signal
 - KISS Risk Sentiment 10/14
- RSI "Buy when others are fearful" with no immediate rescission could be a good time to stay humble and stack sats

_Checkmate 🔑 ⚡ ☢️ 🗄️ 🛡️ @_Checkmatey_ · Nov 6

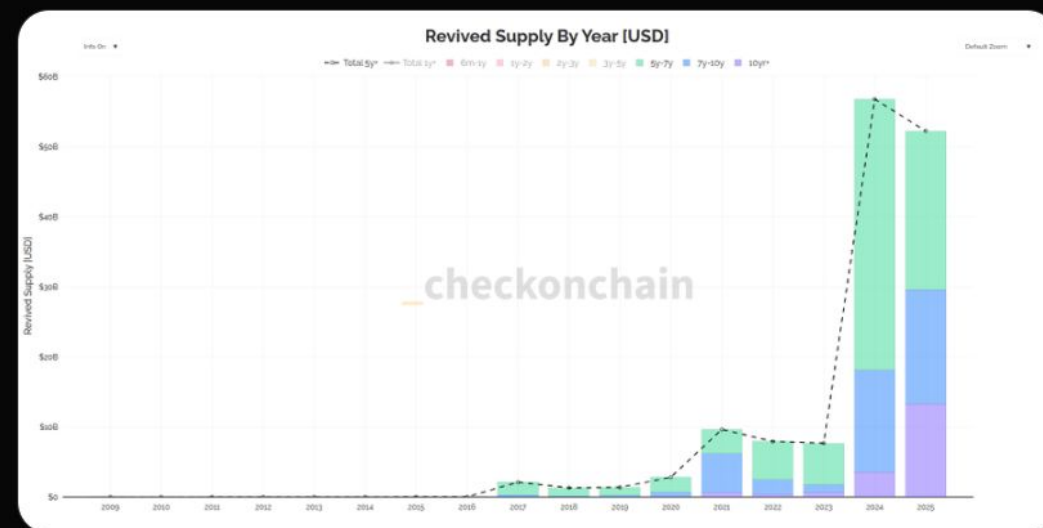

2025 has been the year when the most old coin \$ value has come back to life.

● \$13.3B worth of coins aged 10yrs+ (with ~\$9.5B from that one guy with 80k BTC).

● \$16.2B from 7 to 10yr coins

● \$22.7B From 5y to 7y (1-2 cycle holders)

Total 5y+ revived supply in 2025 is \$52.2B

Shamir's Shards

- If your house burns down tomorrow, can you recover your bitcoin?
- Best practice for protecting your seedphrase
- Why Shamir Shards work well for bitcoin in particular
- Inheritance

OP_Return Wars:

- How familiar is everyone with the issue?
- What questions do you have?
- What would you like to learn?
- Who here is pro Knots? And pro Core?

OP_Return Wars:

- Overall the consensus opinion is that this is a very minor issue, and that it's a DDoS on bitcoiners attention.
 - Social media algorithms flame disagreements.
- **This is why bitcoin meetups are so necessary, so we can have rational and nuanced discussions**

OP_Return Wars:

- Bitcoin is an electronic P2P cash system.
- Its scarce, permissionless, uncensorable.
- Everyone wants this

OP_Return Wars:

Matteo Pellegrini  
@matteopelleg

OP_Return Wars: Consensus

- We need a database to track bitcoins and make sure they aren't duplicated.
- We use *consensus* to make exact replicas of bitcoin database.
- Consensus rules are followed to stay in sync with the other databases in the network.
- Stray, and you're living on a different timeline.
 - Like laws of physics, you really can't change them.

OP_Return Wars: Relay/Mempool Policy

- Just because something might be consensus valid, doesn't make it safe.
- Your node connects to strangers on the internet, and they can crash your node within those rules.
- For security, we establish additional rules with our node.
 - Think of these like government laws. Not tied to physics, but enforced locally.

OP_Return Wars: Bitcoin Script

*“The nature of Bitcoin is such that once version 0.1 was released, the core design was set in stone for the rest of its lifetime. **Because of that, I wanted to design it to support every possible transaction type I could think of.** The problem was, each thing required special support code and data fields whether it was used or not, and only covered one special case at a time. It would have been an explosion of special cases. **The solution was script, which generalizes the problem so transacting parties can describe their transaction as a predicate that the node network evaluates.**” – Satoshi, June 17 2010.*

OP_Return Wars: Bitcoin Script

- Transactions define how bitcoin changes from one hand to another.
- Bitcoin script allows us
- Every transaction has an underlying smart contract that defines
 - Output script (locks coins)
 - Input script (unlocks/authorizes coins)
- Scripts are like walking directions to the park. There are infinite ways to do anything.

OP_Return Wars:

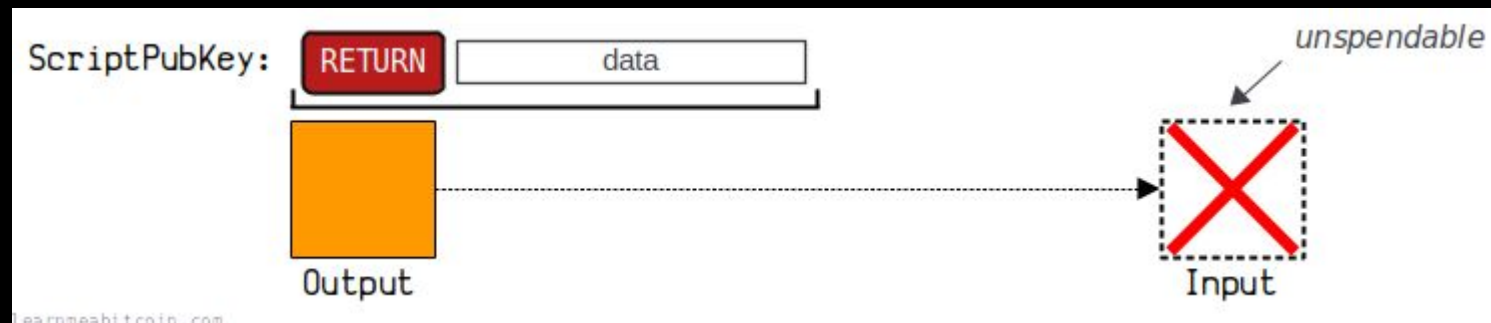

What is OP_Return?

OP_RETURN is short for “return false”

- From a script execution point of view, OP_RETURN does something very simple and very final:
 - Immediately halts script execution
 - Returns false (fails validation)

This means no matter what the rest of the script says, once OP_RETURN is encountered, the output is provably unspendable—because it fails validation by design.

- OP_RETURN lets us store small bits of metadata (like a hash or commitment) in the blockchain without burdening future nodes with outputs that will never be spent.

OP_Return Wars:

History of OP_Return

- An original opcode
- The rick roll of May 2013
- bitcoin 0.9
- Counterparty controversy
- Luke and the Core Devs Stance

OP_Return Wars:

Ordinal Hack of 2022

- What is Taproot and what did it unlock?
- What are ordinals?
- How do they work?
- Community reaction

OP_Return Wars:

Current Controversy

- In April of 2025 OP_Return limit removal gained steam on the [mailing list](#) citing Citrea's watchtower challenge transaction
- Luke Dashjr and Bitcoin Mechanic were vocal opponents of the change
- Bitcoin Core proceeded with relaxing limits in Core's version 30 with a few concessions
- People on twitter lost their minds for 6 months

OP_Return Wars:

What the hell is Citrea?

- *BitVM Optimistic Rollup Bridge*
- Leveraging Bitcoin base chain as judge for disputes and settlement
- Watchtower Challenge transactions - *144 bytes*
 - Taproot scriptPubKey holding first 32 bytes
 - Another taproot scriptPubKey with 32 bytes
 - Last 80 bytes in OP_RETURN

Three transactions with two resulting in permanent UTXO bloat. That's why a larger op_return would be cheaper and less damaging.

OP_Return Wars:

Talking points for Knots:

Preserving Bitcoin's Financial Focus:

- Detractors see Bitcoin first and foremost as a monetary network, not a general data storage network.
- The 80-byte limit is a symbolic and practical guardrail that has kept Bitcoin lean and payment-centric. Removing it would send a message that any and all data is welcome on-chain, fundamentally shifting Bitcoin's purpose.

"It's a very well-publicized increase in the OP_RETURN allowance that very publicly invites more non-financial data onto Bitcoin. Even though apps can already put data in other parts of Bitcoin, this increase sends a signal inviting more such data" - Nick Szabo

OP_Return Wars:

Risk of Spam and Blockchain Bloat:

- The most immediate worry is that without the 80-byte cap, we'll see a surge of spam transactions and bloated blocks.
- If it becomes easier and more “officially allowed” to embed kilobytes of data per transaction, some users (or attackers) may start doing so liberally – from posting files and images to new fad protocols that stuff data into OP_RETURN

Illegal and Indecent Content:

- With bigger OP_RETURNS, the type of content people can embed might cross into dangerous territory.
- Today, 80 bytes might let you store a short message or a hash of a file; 8 000 bytes (for example) could let you store an actual image or illicit material. Researchers have found Bitcoin transactions containing links to illicit imagery and raw data that could be construed as such. Limiting data volume helps reduce that risk.

OP_Return Wars:

Ideological Drift and “Feature Creep”:

- Many opponents feel this change reflects a broader ideological drift in Core’s recent decisions – drifting away from Bitcoin’s minimalist, resilient design towards appeasing niche use-cases. They worry it’s driven by special interests rather than broad community demand.

Security and DoS Concerns:

- Some technical arguments against removal revolve around potential Denial-of-Service (DoS) vectors. Unlimited data outputs could increase parsing overhead or inadvertently create new attack surfaces if not carefully managed.

In short, the anti-removal camp believes **the benefits of the 80-byte cap far outweigh any inconvenience it causes.** Removing it, in their view, opens Pandora’s box to spam, legal nightmares, and a dilution of Bitcoin’s identity as sound money, not a data dumping ground.

OP_Return Wars:

Talking points for Core:

- **Outdated policy** – The 80-byte cap is ineffective; users bypass it using Libre Relay, private relay networks, and direct miner channels. Inscriptions also make OP_Return obsolete.
 - To me this is the biggest point of disagreement
- **Hurts decentralization**: Restrictive defaults push activity into private mempools, weakening Bitcoin's open relay layer.
- **Free-market alignment**: Loosening relay policy lets fees, not arbitrary limits, decide what gets relayed — strengthening the free market of the mempool.

OP_Return Wars:

7m

Nick Szabo  liked your reply

I admire your optimism and perspective, if there isn't a tradeoff to immutability, centralization, or the scaling/privacy benefits of OP_return then it would be worthwhile.

OP_Return Wars:

Talking points for Core:

- **Backfires in practice:** The cap just encourages worse hacks (fake UTXOs, witness stuffing) that bloat the network more than OP_RETURN.
 - Developer attention to censorship and filtering transactions is creating both a culture of and infrastructure for banning transactions.
- **Miner alignment:** Miners already accept larger OP_RETURNs if paid. The default should reflect this reality.
 - The particular size increase isn't motivated by application but because major miners had already removed the rule completely. No other setting would achieve the goal of matching relay to what will actually get mined.
- **Reduce Bloat:** Timestamping, anchoring, inscriptions, and metadata protocols can use OP_RETURN directly instead of hacks that increase bloat to achieve similar effects. Increasing the OP_RETURN limit is harm reduction.
- **Low risk:** OP_RETURN outputs don't grow the UTXO set, it was made to accommodate extra data, it's more expensive than inscriptions, and high fees naturally deter spam.

OP_Return Wars:

Talking points for Core

- Although OP_RETURN was designed for non-spendable metadata, not all use is for arbitrary data or spam. In fact it has been creatively used for financial applications that require:
 - Transaction anchoring and pegging links
 - Coordination (Operator ID's, Address pointers)
 - Dispute settlement and ZK proofs
 - Proof-of-ownership
 - Signaling mechanisms
 - Spoofing protection

OP_Return Wars:

Finding the middle ground

- All bitcoiners agree that bitcoin is not for data storage, it's money
- Change should be slow and steady
- Being skeptical of Devs is the bitcoin ethos, but being conspiratorial to a fault is a vice

Going forward

Top Node Versions			?
Version	Count	Pct.	
Core 30.0.0	2,809	11.93%	
Core 28.1.0	2,496	10.60%	
Core 29.1.0	1,910	8.11%	
Core 29.0.0	1,909	8.11%	
Core 26.0.0	1,692	7.18%	
Core 29.2.0	1,270	5.39%	
Knots 20251010	1,257	5.34%	

Ordisrespectors 2023

Bitcoin should be a monetary maximalist protocol

Ordinals, Runes, BRC-20, stamps are a clunky use of blockspace and displace monetary transactions

They also bloat the UTXO set, and are a DDoS attack on the system resources of node runners

[wtfhappenedinf2023.github.io](https://github.com/wtfhappenedinf2023)

Running Knots 2025

Bitcoin has been corrupted and hijacked by woke blue haired trannies.

The only people who should be allowed to contribute to FOSS are the people I hand select

CSAM CSAM CSAM CSAM CSAM

Bitcoin Amsterdam 2025

Key takeaways:

1. Bitcoin is only 3% adopted worldwide - compared to the internet in 1996
2. Fiat is war, Bitcoin is peace
3. Use bitcoin to store your time and energy for generations to come
4. Bitcoin backed lending is by far the most popular product - Jack Mallers

Does anyone here have any takeaways?

Jersey City Bitcoin Meetup

Mission Statement

Our mission is to create a Bitcoin education center in Jersey City

- To educate, empower, and enrich individuals through Bitcoin, extending financial sovereignty through grassroots activism.
- We aim to bring the robust Bitcoin education movement to JC
- We are a network of local Bitcoiners teaching people how to live free on sound money.
- We aim to build locally, educate our community, train educators, and open source our best practices to streamline local adoption all over the world.
- We will inspire curiosity and bridge our community to bitcoin infrastructure

Club Direction Socratic Discussion

- **Board Memberships**
 - **Chair:** GC
 - Main organizers
 - **Marketing and Recruitment:**
 - Social media promoter, guerrilla marketing, local street fair organizer
 - **Website Manager:**
 - Website editor, posts about events
 - (Maybe we combine this with Marketing)
 - **Treasurer:** Jimmy
 - Maintains btc treasury, pays for the event space, accounting
 - **Partnerships Manager:** (Harrison)
 - Explores partnerships with local businesses and government, looks for sponsorship opportunities from bitcoin companies, works with JC Economic development
 - **Secretary:**
 - Legal stuff, bylaws, non profit paperwork, takes meeting minutes and notes
 - **Cypherpunks:**
 - Suggest content ideas, general contributor, helps maintain direction of the club

Jersey City Bitcoin Meetup

Core Vision

Create a self-sustaining Bitcoin Meetup chapter that transforms Bitcoin interest into practical understanding and real-world application.

This club operates as a local hub for Bitcoin knowledge, community, and empowerment.

Jersey City Bitcoin Meetup

Organizational Pillars

Education: Teach sound money, self-custody, nodes, Lightning, and the philosophy of Bitcoin.

Empowerment: Helping individuals build independence from fiat systems and centralized control through onboarding into the bitcoin economy

Enrichment: Enable members to create value and prosperity through Bitcoin adoption.

Jersey City Bitcoin Meetup

IV. Brand Identity

Mission: Educate → Empower → Enrich.

Values: Truth, Responsibility, Freedom, Integrity.

Tone: Minimalist, factual, Bitcoin-only.

Jersey City Bitcoin Meetup

Who here wants to be apart of something bigger than themselves?

Youtube Spotlight:

Bitcoin History:

November

Nostr Spotlight:

Bitcoin News: NPM Attack?

- Node Package Manager (NPM) developer account was hacked via phishing
- Attack focused on web wallets and was swapping receive addresses for the attacker's wallet address
- Only about \$500 in crypto was stolen, and the attack was quickly contained due to implementation errors causing crashes
- Massive panic triggered on social media
 - No popular bitcoin only wallets impacted

Bitcoin News: Patriot Act 2.0

- The PATRIOT Act allows the US Government to bypass the constitution in the face of *terrorism*, including warrantless surveillance and the suspension of due process rights
 - Has led to the unjust imprisonment and torture of hundreds of people around the world
- FinCEN Director confirmed that the Treasury is working on the “mixer rule,” which uses the PATRIOT Act to prohibit private transactions in cryptocurrency
 - Cryptocurrency swaps, transaction delays, "tx splitting," creation of single-use addresses, wallets, and accounts
 - Could put users under suspicion with the authorities, potentially ending in criminal liability

Bitcoin News: Bitchat Surge in Nepal

- Nepal banned social media to suppress proof of government corruption including embezzlement of public funds, cronyism in contracts & abuse of power for personal gain
 - Burned the parliament building & the supreme court
 - Ousted the PM and deposed the administration
- In response to social media bans, there was a surge in downloads of bitchat

 **callebtc** @callebtc · Sep 10

Last week, we observed a sudden spike in bitchat downloads from Indonesia during nationwide protests.

Today we're seeing an even bigger spike from **Nepal** during youth protests over government corruption and a social media ban.

Freedom tech is for the people. Please share.

Bitcoin Book List: The 4th Turning

The 4th Turning: William Strauss & Neil Howe

- Covers 500 years of history to show that modern history moves in ~80-year cycles
 - About the length of a long human life
 - Composed of four, ~20-year turning eras
 - growth, maturation, entropy, and rebirth

“Hard times create strong men, strong men create good times, good times create weak men, weak men create hard times”

Bitcoin History: Does it matter who Satoshi is?

No.

- No one controls bitcoin, not even Satoshi
- Could he sell his coins (possibly ~1,000,000 BTC)?
 - If the private keys still exist, yes
 - Could it trigger a massive bear market? yes
 - But, you can only sell once and everything we know about bitcoin would still be true

r/Bitcoin • 2 mo. ago

Generationhodl  Top 1% Commenter

80k bitcoin has been sold by galaxy, and we are still at 117k.

Bitcoin History: So Who is Satoshi?

- Notable people theorized to be Satoshi
 - Dorian Nakamoto (nope)
 - Jack Dorsey (it's not Jack)
 - Hal Finney (sorry, not Hal either)
 - Peter Todd
 - Len Sassaman
 - Nick Szabo
 - Adam Back
 - The CIA
 - red hat? black hat? white hat?
- No theory has been conclusively proven

Bitcoin History: Who is NOT Satoshi?

- The only person who was proven, in a court of law, NOT to be Satoshi, is Craig Wright

Justice Mellor Rules That Craig Wright Is Not Satoshi Nakamoto in COPA v Wright Trial

Today, Justice Mellor found that the evidence in the COPA v Wright trial was “overwhelming,” ruling that:

1. Dr Wright is **not** the author of the Bitcoin White Paper.
2. Dr Wright is **not** the person who adopted or operated under the pseudonym Satoshi Nakamoto from 2008 - 2011.
3. Dr Wright is **not** the person who created the Bitcoin System.
4. Dr Wright is **not** the author of the initial versions of the Bitcoin software.

Justice Mellor commented: “Any further relief will be dealt with in my written judgement. I will extend time for filing any appellant's notice until 21 days after the form of order hearing, which will be appointed following the hand down of my written judgement.”

A COPA spokesperson said, “This decision is a win for developers, for the entire open source community, and for the truth. For over eight years, Dr. Wright and his financial backers have lied about his identity as Satoshi Nakamoto and used that lie to bully and intimidate developers in the bitcoin community. That ends today with the court’s ruling that Craig Wright is not Satoshi Nakamoto.”
