

Jersey City Bitcoin Socratic Seminar #3

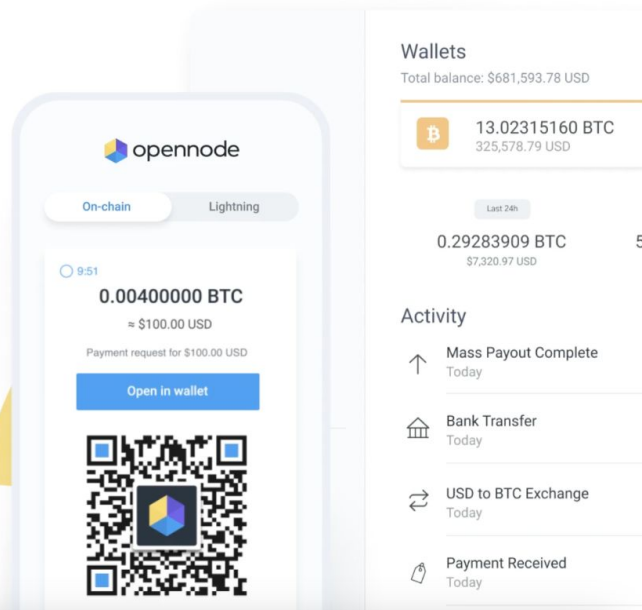

Pizza Sponsored by

opennode

Bitcoin payments at the speed of now

Get lightning-fast, low-cost bitcoin payments and payouts for your business with our powerful API, ecommerce plugins, or hosted payment pages.

Agenda:

- Intro
- Intro to Crypto
- Bitcoin Price Update
- Macro Update
- Meme of the Month
- Mises Meeting
- Freedom Tech Spotlight
- Club Direction and 2026 Goals
- Book Sharing Program

Jersey City Bitcoin Education Center Library & Book Sharing Program

- Bring bitcoin books you have already read and exchange for ones you haven't! Trade back the following month.
- Borrow books from current library with Sats deposit. Return next month and receive your deposit back.
- Konsensus Network provides discounts on book purchases from Bitcoin Communities. This should be available soon.

JC Bitcoin Meetup General Guidelines

- Basic Rules:

- Please no photos, no videos, no public tagging without consent!
- This group is Bitcoin only so please limit discussion of other cryptocurrencies.
- PLEASE respect the space. We love the barrow mansion and ask for help making it look better than when we arrived.
- For newcomers and OGs alike it is worth reiterating that absolutely no one from JC Bitcoin will ever solicit Bitcoin or crypto transfers here or on any other channel

Classical Encryption

How did Julius Caesar do it?

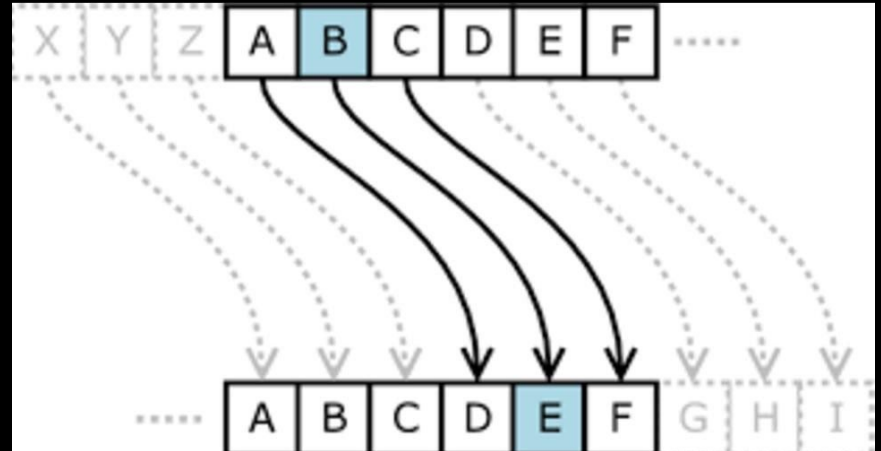

Historic Cryptography

Julius Caesar sent encrypted battle messages to generals by shifting letters

Algorithm: Shifting Letters

Key: 3 spaces (secret)

dwwdfndwrqfh -> attackatonce

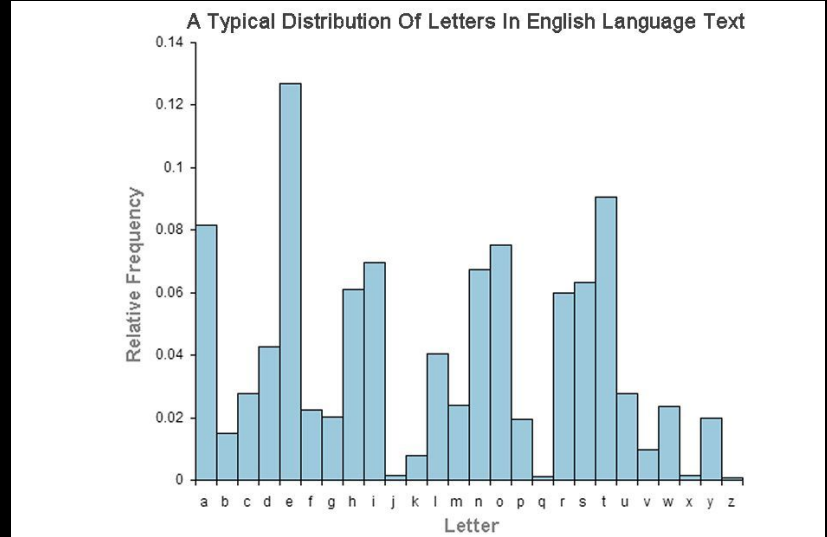

Breaking Encryption (Cryptanalysis)

Brute force

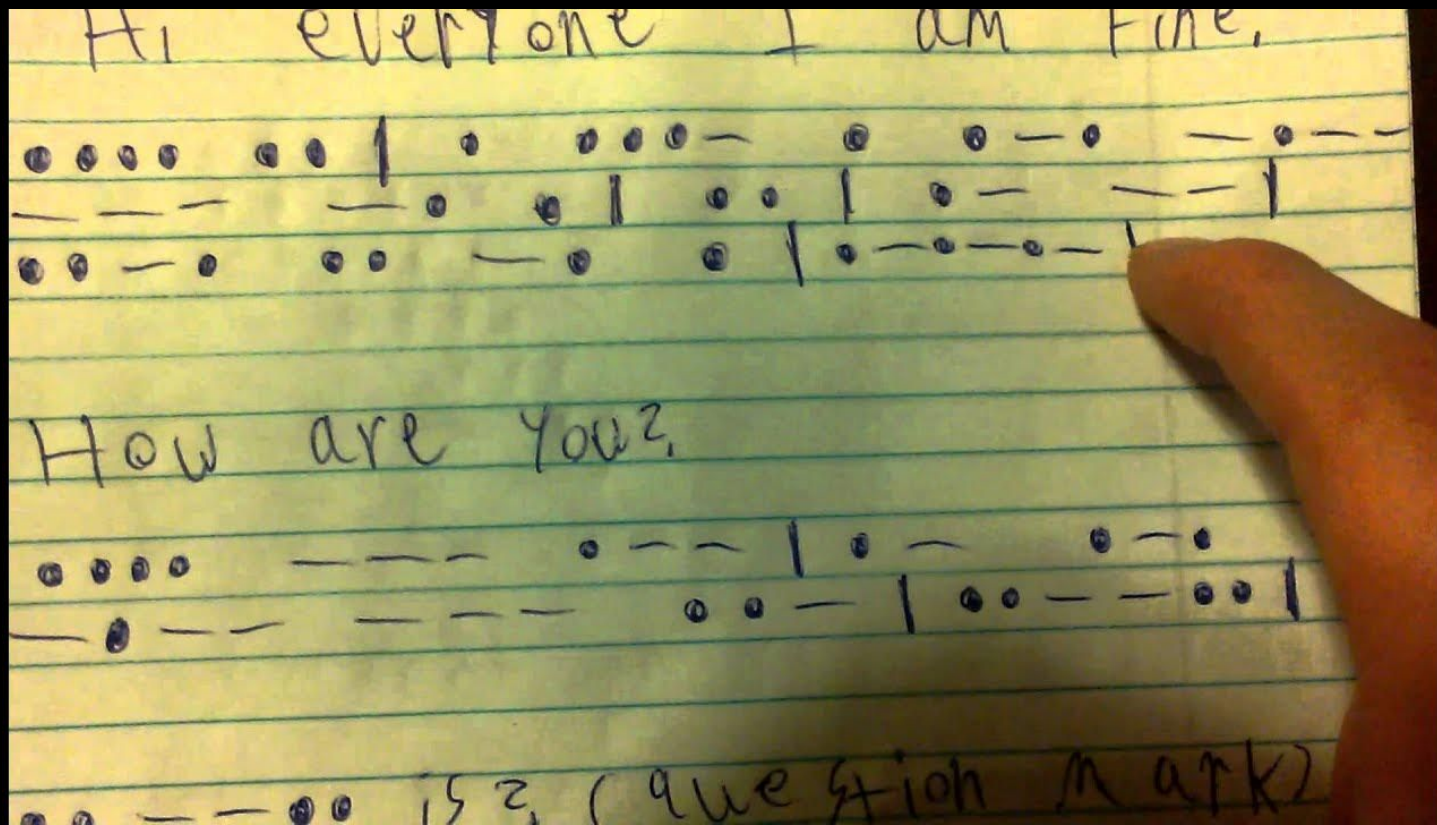

Analytical Attack

Modern Encryption

How do computers do it?

First, Encoding

Computers only see numbers

100100111...001010101 ← “ATTACK AT ONCE!”

*** 010010001...0111100010** ← <secret key>

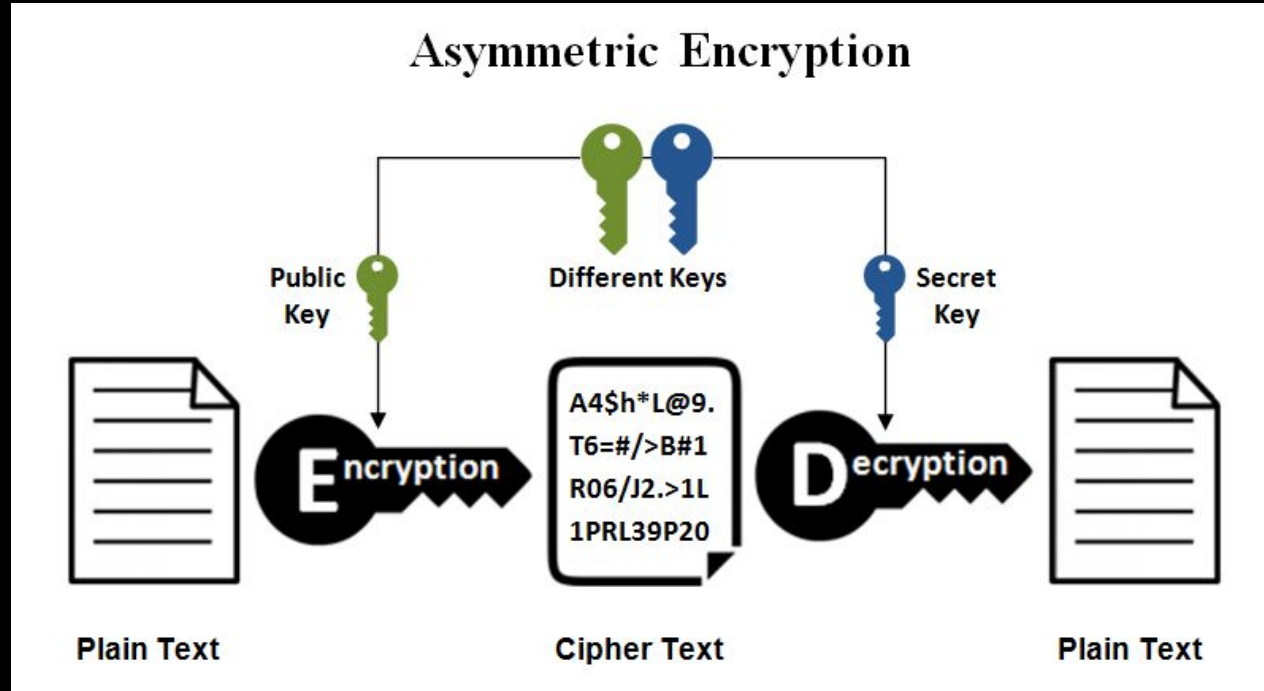

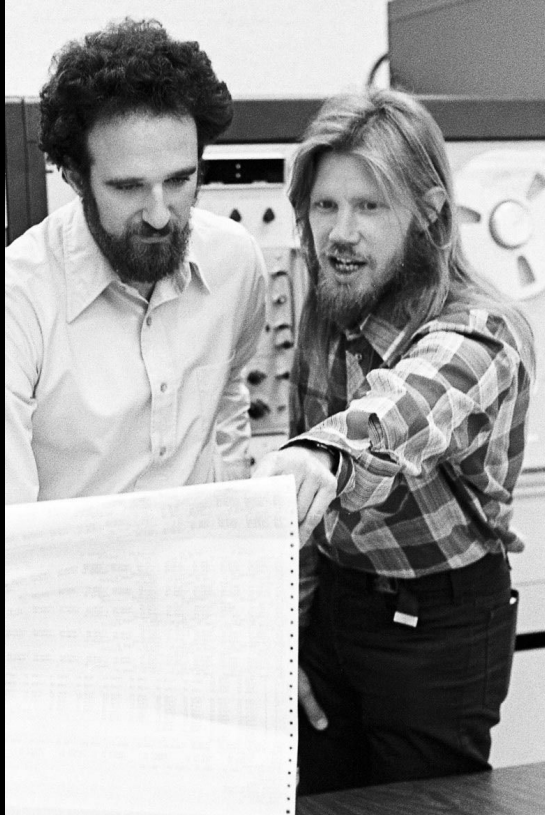

1000100100...011001111 ← “*hf@y5NH@#Ns&”

AES-256 uses 256 bit keys, or...

*115,792,089,237,316,195,423,570,985,008,687,907,853,269,984,665,6
40,564,039,457,584,007,908,834,668,087 possible keys*

How do we share secrets?

Private and Public Keys

You use this every day without knowing

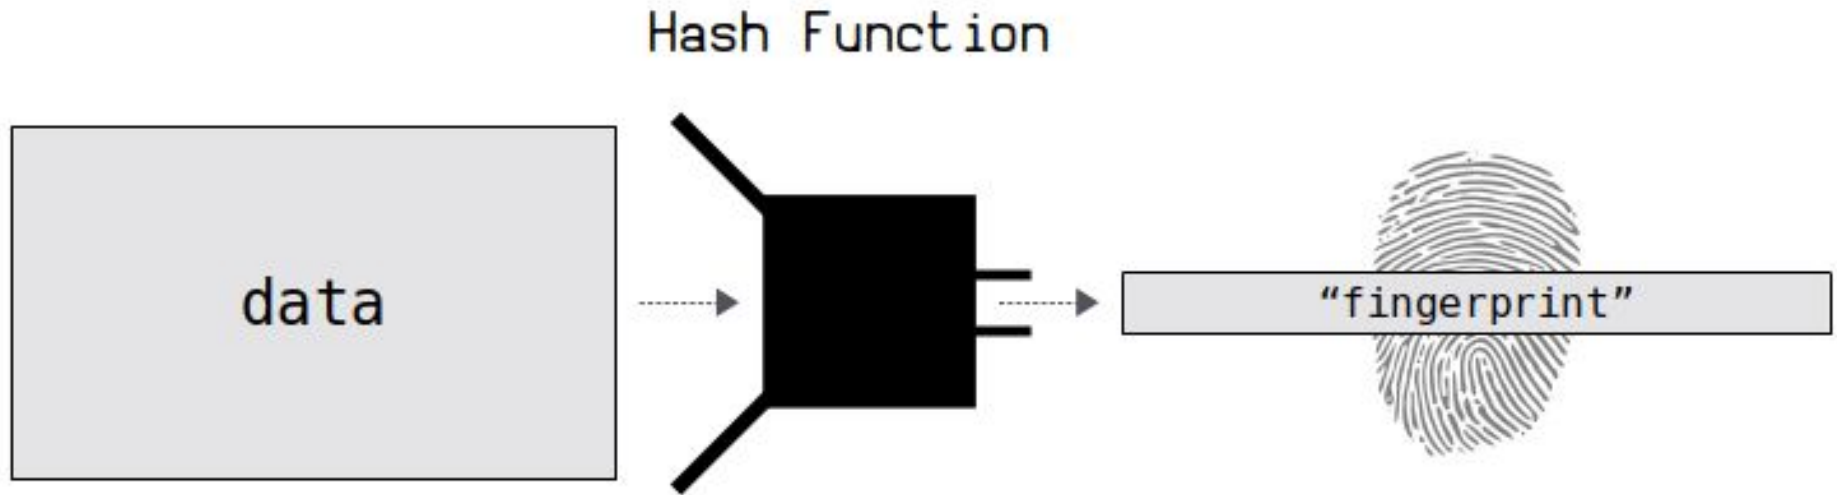

https://

Hashes and Identification

Hashes are basically data fingerprints

Arbitrary data in → Fixed size ID out

Who said what?

How Hashes and Encryption let us verify integrity of a message

How digital signatures work

Signing a document

1. Hash the message → fingerprint of what you're signing
2. Encrypt that hash with your private key → this is your signature
3. Send message + signature

Verifying a signature

1. Hash the message yourself
2. Decrypt the signature with sender's public key
3. Compare fingerprints

Prove something hasn't been tampered with

- King has a signet ring
 - Private key
- Stamp pattern everyone recognizes.
 - Public key
- Wax binds seal to specific letter
 - Signature (proves nobody tampered)

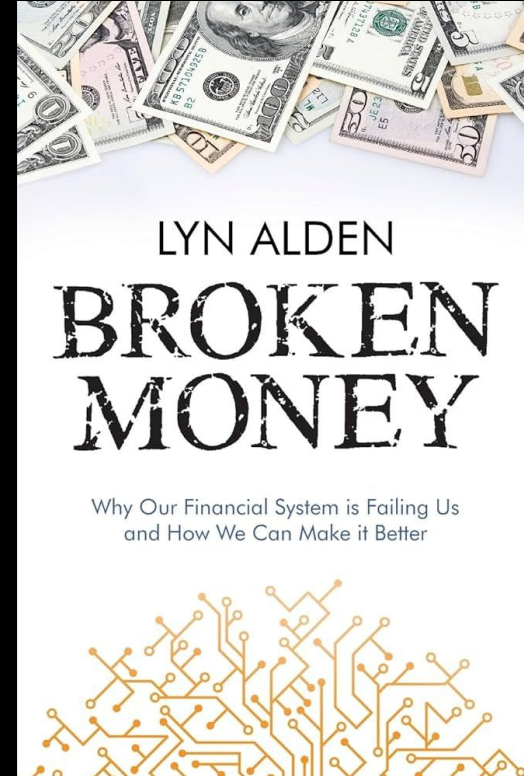

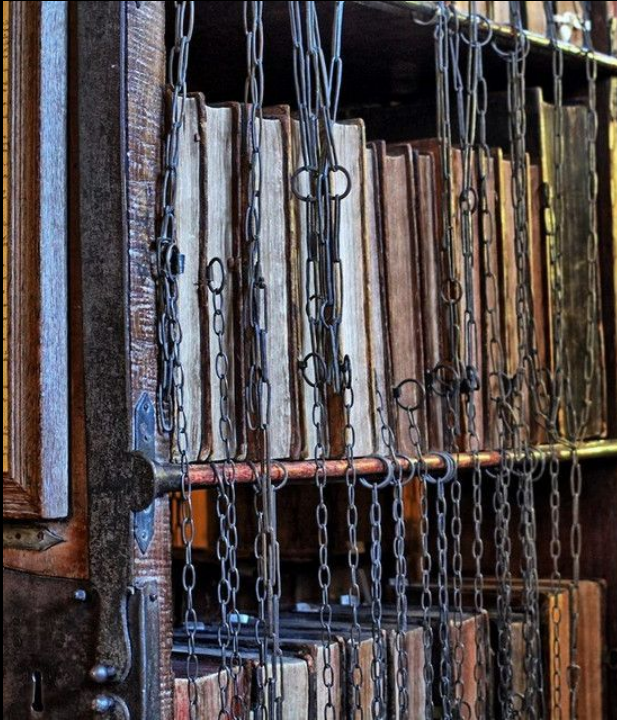

This is considered a “Protocol”

Buzzword alert!

Foundations for a new Internet

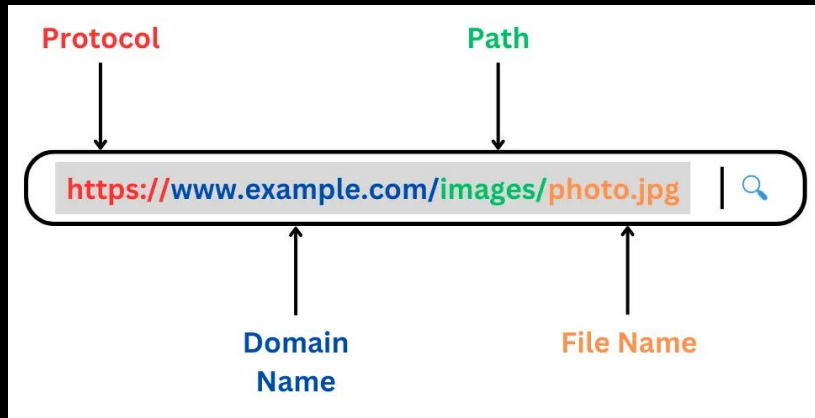

What we mean by “decentralized”

Centralized vs Decentralized

Same idea on the internet

Location-addressed Internet

Content-addressed Internet

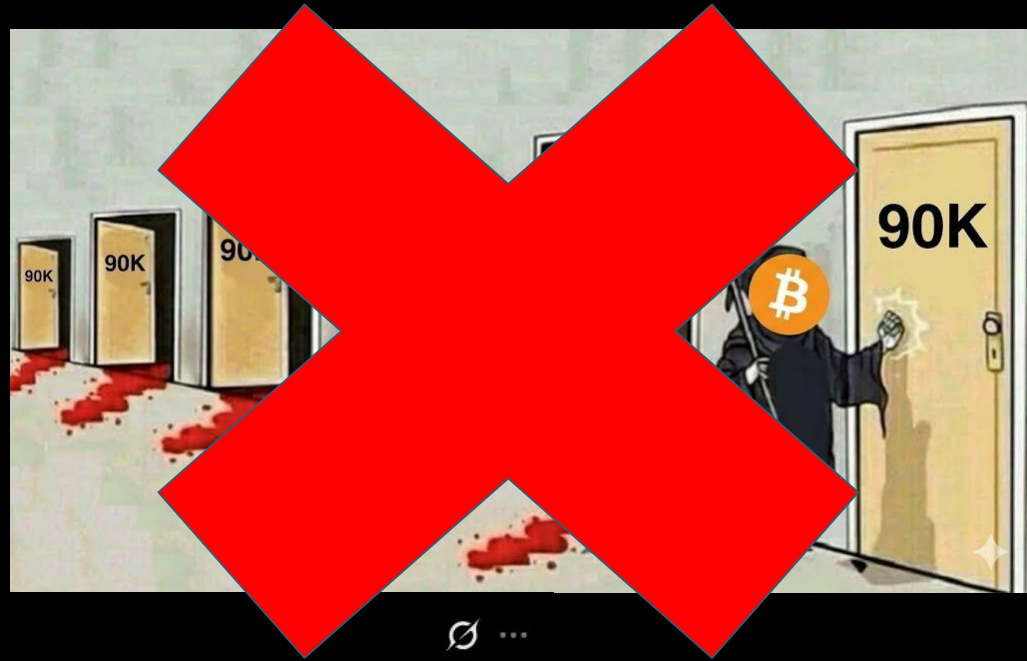

Learn how to use keys

Bitcoin Price Update:

- ~~Flat since last month~~
 - We're ripping!
- No movement from options expiry though
- Golden pocket at \$94K could now be a strong support
- Bull trap or new floor?

Will ✓

@WClementeIII

This environment is literally what Bitcoin was created for. The President is coming after the Fed chair. Metals are ripping as sovereigns diversify reserves. Stocks & risk assets at record highs. Geopolitical risk rising.

If bitcoin can't catch a bid soon then IDK

BITCOIN TWITTER IS DEAD. LONG LIVE BITCOIN TWITTER.

On January 10th, 2009, a single tweet changed the internet.

Hal Finney posted two words, “Running Bitcoin,” and Bitcoin Twitter was born.

Seventeen years later, that same social graph has helped onboard millions of people [Show more](#)

Okay so the "crypto bros" have been bothering me consistently for the past 2 months about the algo.

And truth be told yes WE at X are heavily focused on removing bubbles such as "CT" from our app.

For transparency, moving forward the algo will be 70% less likely to push posts identified as crypto related to larger audiences.

Freedom Tech Spotlight

Breaking the Blackout: Iranian Protestors Use Freedom Tech to Bypass Regime Crackdown

As Iran imposes sweeping internet restrictions, protestors are turning to Bitcoin-linked apps like Bitchat and its localized fork Noghteha — leveraging mesh networks and cypherpunk ideals to maintain communication amid the blackout.

By **Conor Mulcahy** January 12, 2026

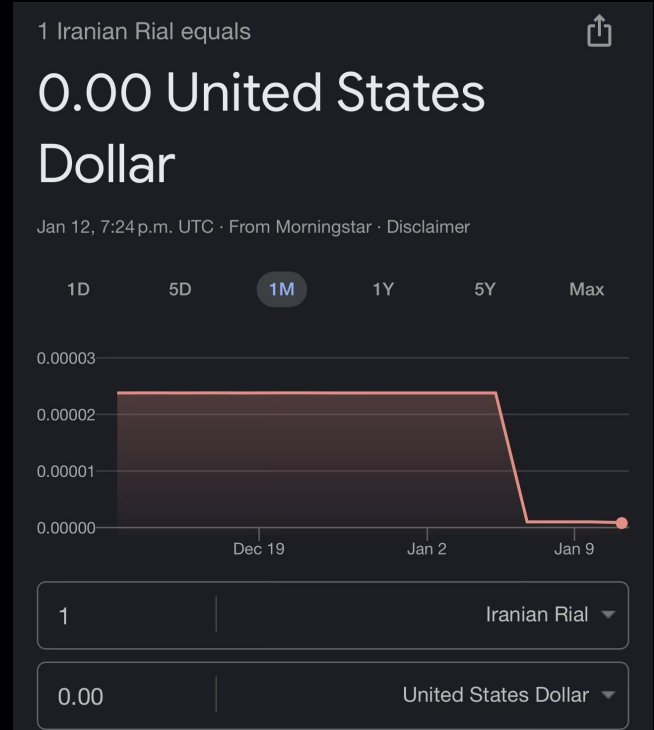

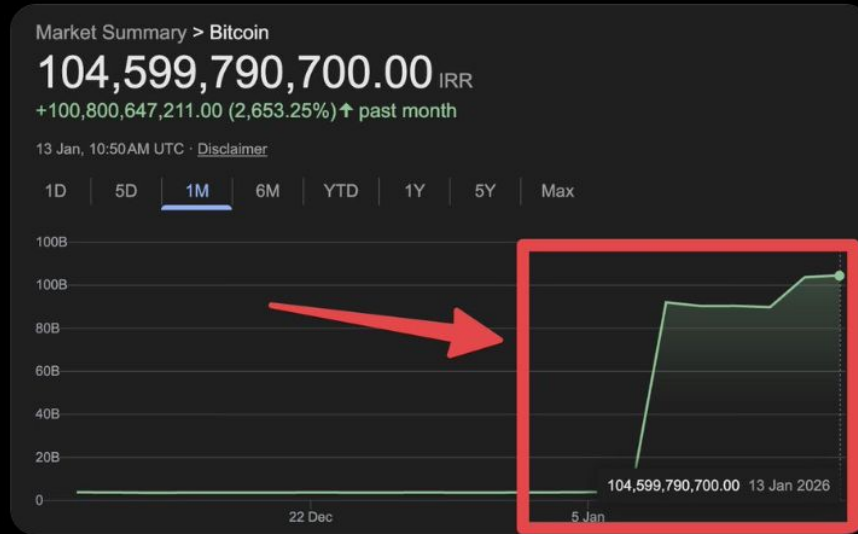

Daniel Sempere Pico  @dansenperepico · 14h

Bitcoin is up 2,653% in Iranian Rials because the currency is collapsing.

Iranians who held bitcoin preserved their wealth.

Iranians who trusted their currency lost 96%.

Everyone deserves money their government can't destroy.

Bitchat tops app charts in Uganda as authorities cut internet

1 hour ago

Ugandan officials claimed that they could also shut down the internet-free, encrypted messaging app last week, but haven't done so yet.

 Listen 2:44

Bitchat just leveled up.

@callebtc merged source-based routing and mesh topology for way more efficient, battery-friendly direct messaging.

No servers, no internet needed.

Summary

1. The Problem with Simple Broadcasting

In a basic mesh network, when a device wants to send a message to everyone, it broadcasts the message to all its direct neighbors. Each of those neighbors then broadcasts it to their neighbors, and so on. This is known as "flooding." While simple, it has major drawbacks:

- **Network Congestion:** Every message is sent across the entire network, even if it's only intended for one person. This creates a lot of unnecessary traffic.
- **The "Broadcast Storm":** In a dense network, devices can receive the same message from multiple neighbors, leading to an exponential increase in redundant transmissions.
- **Inefficiency:** It's like shouting in a crowded room and hoping the right person hears you, while everyone else has to stop and listen.

2. The Solution: Source-Based Routing

Source-based routing solves this by having the sender of a message determine the entire path the message should take to its destination. This is like giving a package to a mail carrier with a specific list of post offices it must visit to reach its final address.

GM All -- we are putting together initial dates for our Park 2026 Sch...

Miles Suter from Block (Bitcoin Lead at CashApp/Square) is going to join us for Grassroots Bitcoin 2026 and give us all a behind the scenes look. Moreover, I want him to meet each of the meetup organizers in attendance and y'all develop a direct relationship (if you want) with him and Square to help with your own local Bitcoin grassroots efforts.

More to come 🤝
