

Jersey City Bitcoin Socratic Seminar #6

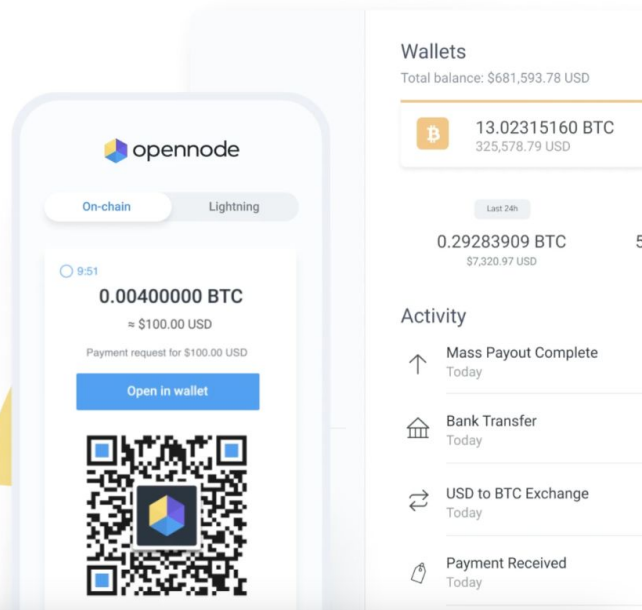

Sponsored by:

opennode

Bitcoin payments at the speed of now

Get lightning-fast, low-cost bitcoin payments and payouts for your business with our powerful API, ecommerce plugins, or hosted payment pages.

Agenda:

- Intro
- Book Sharing Program
- Grassroots Recap
- Marketing
- CRM
- Website
- Macro Update: War!
- Bitcoin Price Update
- Bitcoin News
- Ai & BTC
- Quantum?
- Freedom Tech Spotlight: Fedi

JC Bitcoin Meetup General Guidelines

- Basic Rules:

- Please no photos, no videos, no public tagging without consent!
- This group is Bitcoin only so please limit discussion of other cryptocurrencies.
- PLEASE respect the space. We love the barrow mansion and ask for help making it look better than when we arrived.
- For newcomers and OGs alike it is worth reiterating that absolutely no one from JC Bitcoin will ever solicit Bitcoin or crypto transfers here or on any other channel

Jersey City Bitcoin Education Center Library & Book Sharing Program

- Bring bitcoin books you have already read and exchange for ones you haven't! Trade back the following month.
- Borrow books from current library with Sats deposit. Return next month and receive your deposit back.
- Konsensus Network provides discounts on book purchases from Bitcoin Communities. This should be available soon.

Marketing Initiatives

- Challenge: every member brings ONE friend
- Strategy calls - Sunday Coffee shop or zoom? Sunday at 11 10/10 (real coffee real people)
- Openclaw?
- Can someone print stickers/Fliers?
 - Bulletin board
- Helen's Partnership
- Fundraiser - Networking Event
- All about Downtown 9/19
 - Big Orange Tent ~\$400
- \$50 Yearly Membership - Satoshi Fellow
 - Resume builder
 - Merch!
 - Members Group Chat Access

JC Bitcoin CRM

Private contact management system for the Jersey City Bitcoin meetup.

What this is

Structured Markdown files tracking members, attendees, speakers, and sponsors. Each contact is one file. Each event is one file. Claude reads and writes these files on demand.

This repo is **private**. It is gitignored from the public TBB repo. Do not fork, screenshot, or export contact data without consent.

Website!

- More inviting, more beginner
- Open to all
- Open house type of feel
- Help members turn to a bitcoin standard, step by step, guided way to hold their hands, it's coming up a lot on the show
 - The challenge is everyone is different
-

Macro Update

- TBL Liquidity flipped BUY in April (short term bump)
 - Captured ~20% downside from January sell signal
 - Cyclical liquidity top was Q4 2025, trough expected 2027
 - Lyn is near term cautious though
- \$73K resistance -- horizontal anchor meets descending trendline from ATH
- Iran/oil crisis draining liquidity three ways
 - Oil: every \$10/barrel = 3% off global liquidity
 - MOVE index: every 10 points = 4% off liquidity
 - Dollar strength: roughly 1:1 with liquidity loss
- Real economy sucking money out of financial markets
 - AI capex: hyperscalers issuing 100-year bonds
 - \$45 trillion debt maturity wall by 2030
- Fed RMP program is stealth QE
 - China PBOC injecting ~\$1 trillion/year
 - M2 just hit all-time high
- Software getting repriced as AI makes code abundant
 - Bitcoin is scarce, software is not
- "Don't trade bitcoin or gold -- own them"
 - Bitcoin: near-zero dilution vs 3% net dilution for treasuries
 - Nothing stops this fiscal train -- \$40T grinding to \$50T

Bitcoin Price Update

JUST IN: 🇮🇷 Iran to require ships passing through the Strait of Hormuz to pay tolls in Bitcoin, FT reports.

NEW: Iran's parliament just codified a toll system for the Strait of Hormuz, and reports claim bitcoin is one of the payment rails.

The onchain evidence says otherwise. But the strategic logic behind a sanctioned state reaching for a bearer asset outside the dollar system is real.

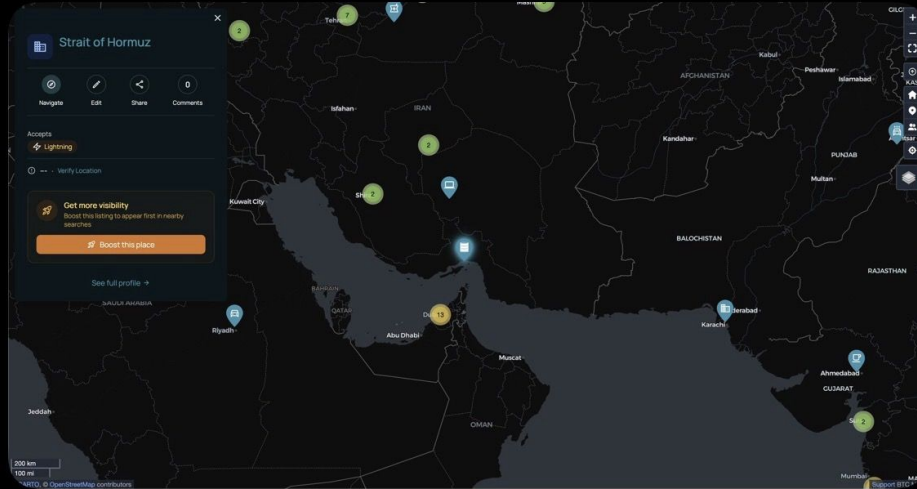

Our latest State of Play examines Iran's decade-long digital asset strategy, what blockchain analytics actually show, and why the Hormuz story matters less for what Iran is doing today and more for what it reveals about Bitcoin's growing role in geopolitical competition.

Yes, Errol Musk (Elon's father) said exactly that today in a BelnCrypto interview: his sons Elon and Kimbal own 23,400 BTC combined (~\$1.75B at current prices). He called crypto "the future of finance" and the old system "finished."

No confirmation yet from Elon or Kimbal. Tesla holds ~11.5k BTC separately as a company.

Talk to Your Node: Bitcoin Verification via SSH

TUTORIAL

BITCOIN

SELF-HOSTING

Abstract

Your Bitcoin node validates every block and every transaction, but you have probably never asked it a direct question. This tutorial opens a secure SSH tunnel to your StartOS node and walks you through querying it: verifying the total money supply, reading the mempool, estimating fees, inspecting blocks, and monitoring the network. By the end, you will know how to get answers from your own copy of the blockchain instead of trusting a website.

How We Built Bitcoin's AI Research Brain

[README](#)[License](#)[Apache-2.0 license](#)[MIT license](#)

Bitcoin Knowledge Base (BKB)

A Bitcoin-ecosystem-specific knowledge base that ingests, indexes, and serves structured data from multiple sources across the Bitcoin and Lightning development ecosystem. Designed to be queried by AI agents via MCP (Claude) and OpenAI Actions (ChatGPT) for fast, precise lookups.

Indexed knowledge from across the Bitcoin and Lightning development ecosystem, queryable by AI agents.

TFTC  @TFTC21 · Apr 9

A researcher named Avihu Levy, CPO at StarkWare, published a proposal claiming to make **bitcoin** transactions quantum-safe without requiring any changes to the **bitcoin** protocol.

The scheme, called Quantum Safe **Bitcoin (QSB)**, reportedly works within **bitcoin's** existing consensus

[Show more](#)

Quantum-Safe Bitcoin Transactions Without Softforks

Avihu Mordechai Levy*
StarkWare

April 9, 2026

Abstract

We present QSB, a Quantum Safe Bitcoin transaction scheme that requires no changes to the Bitcoin protocol and remains secure even in the presence of Shor's algorithm. Our construction modifies BINHASH (Linus, 2026), replacing its non-quantum-safe component—the signature-size-based proof-of-work puzzle—with a hash-to-sig puzzle whose security depends only on the pre-image resistance of RIPEMD-160. The resulting scheme achieves ~ 118 -bit second pre-image resistance under the Shor threat model (roughly half under Grover's algorithm), at an estimated off-chain GPU cost of a few hundred dollars. The scheme fits within Bitcoin's legacy script constraints of 201 opcodes and 10,000 bytes.

Bitcoin Archive 🌟
@BitcoinArchive

X.com

Cypherpunk Jameson Lopp and other Bitcoin developers propose BIP-361 to freeze quantum vulnerable wallets.

This could lock dormant BTC like Satoshi Nakamoto's 1.1M coins, now worth \$74B, before quantum computers can steal them.
